

Auto Power Management

For Windows Vista or Windows 7 Desktop and Laptop

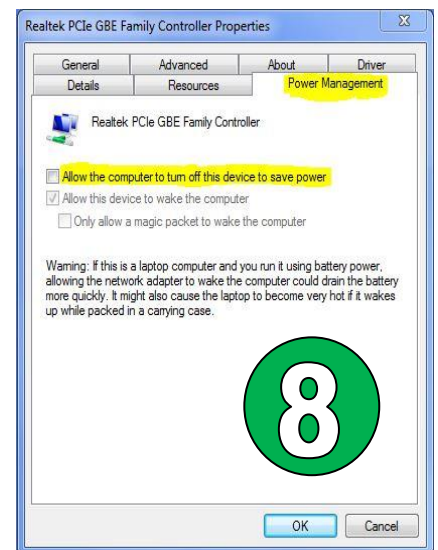

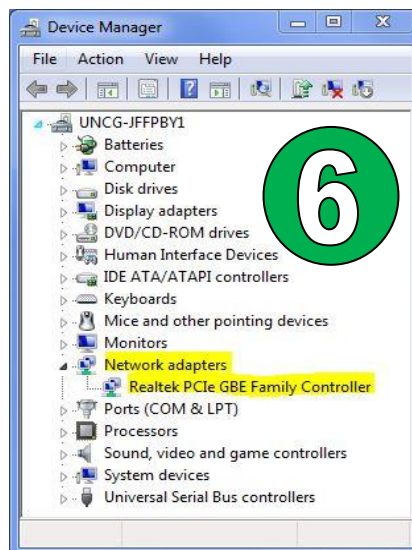

PART A

1. Start > Control Panel > System and Security > Power Options
2. Choose “Power Saver” then click on “Change plan settings”
3. Set “Turn off the display” to 5 minutes then click on “Change advanced power settings”
4. Expand the **Sleep** option and change the following settings:
 - Sleep after
Setting: 10 minutes
 - Hibernate after
Setting: 20 minutes

PART B

5. Start > Control Panel > Hardware and Sound > Device Manager
6. Expand the **Network adapters** option then double click on the “Realtek PCIe GBE Family Controller”
7. Select the **Power Management** tab
8. Uncheck “Allow the computer to turn off this device to save power”
9. Click “OK” and you are good to go!
